## Akiyama and Integrated Biometrics Launch VERO MATCH at ID4Africa

**SPARTANBURG, S.C., June 15, 2022** – Akiyama today announced the launch of its biometric collection case, VERO MATCH, advancing the landscape of the global, mobile security and identification market. Built using the FIVE-0 fingerprint scanner from Integrated Biometrics (IB), VERO MATCH enables FBI-certified, FAP 50, 10-finger enrolment and verification in a compact, modular design.

Akiyama's innovative approach to the VERO expanded on a portable solution originally completed in 2018 for the Federal Police of Brazil featuring a notebook and Integrated Biometrics Kojak 10-finger desktop fingerprint scanner. The new VERO MATCH incorporates a smartphone, IB's FIVE-0 fingerprint scanner and IDEMIA's Automated Biometric Identification System (ABIS) integrated into an application that will again, be used by the Federal Police. It enables faster, easier processing for the capture of biometric fingerprints and facial images in congested environments such as transportation lines, immigration controls and police checkpoints. The equipment dramatically reduces the possibility of misrepresentation or falsified documents.

"In this post-pandemic environment, with the need for quick, accurate biometric identification, VERO is the solution to fulfil the needs of the Federal Police and the security and identification market," said Matheus von Biveniczko Tomio, Product Manager, Vero's creator.

"Its unique configuration and size, along with Five-0's ruggedness, low power consumption and usability make VERO MATCH one of the market's most flexible products," said David Gerulski, EVP, Integrated Biometrics. "We are pleased to be an integral part of this distinctive solution."

Akiyama takes advantage of its participation in the 2022 ID4Africa on June 15th and 16th, in Morocco, to make this announcement.

## **About Akiyama**

Akiyama is a Brazilian company specializing in biometric identification solutions. A pioneer in the market, its solutions are deployed globally in the areas of civil, criminal and newborn identification. The company continually invests in R&D for solution development and customization. It has national and proprietary software and hardware and always seeks the best technological option for identification solutions, so that not only develops and markets its own technologies, but is proud to represent the main global brands through partnerships solid and lasting. ## **About Integrated Biometrics**

*Integrated Biometrics (IB), a pioneer in biometric fingerprint technology, designs and manufactures advanced, high-resolution touchless and FBI-certified contact identity solutions for government, law enforcement, military, social services, and a wide range of commercial applications. IB's lightweight scanners, supported by our patented light-emitting sensor (LES) technology, outperform traditional fingerprint devices in size, power consumption, portability, and reliability. Global organizations rely on IB's products to enroll and verify identities quickly and accurately, even in remote locations under extreme conditions. Commercial enterprises, government and financial services organizations depend on IB to build innovative, secure applications to establish identity in accordance with national and international standards.*
